

June 25, 2020

Ms. Kelly Lee Kinkaid PG; Licensed Professional Geologist

Pennsylvania Department of Environmental Protection
Bureau of Waste Management
909 Elmerton Avenue
Harrisburg, PA 17110-8200

REF: 1st Quarter 2020 Form 19, 50 and 52 Submittal
Frey Farm Landfill; BWM Permit #101389

Dear Ms. Kinkaid:

In accordance with the Municipal Waste Management Regulations, the Lancaster County Solid Waste Management Authority (LCSWMA) continues the above-referenced monitoring program.

LCSWMA provided the 1st Quarter 2020 data on April 8, 2020 to ARM Group and then ARM Group has provided an analysis for the groundwater, leachate, and contiguous landowners data. ARM Group's report is attached to this submittal.

Groundwater:

In accordance with the Municipal Waste Management Regulations, the Lancaster County Solid Waste Management Authority (LCSWMA) continues the above-referenced monitoring program.

Attached are the Forms 19, laboratory reports, and data export excel file for uploading the data into your LandLinks Access database.

Leachate:

In accordance with both the Pennsylvania Municipal Waste Management and the Federal Subtitle D Regulations, the Lancaster County Solid Waste Management Authority (LCSWMA) continues to complete the above referenced monitoring program. Enclosed is the Department's Form 50 - "Municipal Waste Landfill Leachate Analysis" for the quarterly monitoring period.

- LCSWMA continues to monitor the Form 50 parameters from location FFLEINFS. This location is the leachate collection system for the Frey Farm Landfill and represents "raw" leachate characteristics for the facility, as collected from the six (6) landfill cells.
- As indicated on the Form 50, the primary leachate collection and secondary detection systems encompass approximately 93 acres of drainage area.

- At DEP's request, we have included analyses of the four (4) secondary individual detection zone discharges with an individual Form 50 for each.
- Included on the CD are files which contains the FFLEINFS data in a compatible format for your LandLinks software. The CD also contains a pdf file of the laboratory results and the Form 50.

In accordance with Section 273.255(d)(1)(2) and (3) of the Municipal Waste Management Regulations, the Lancaster County Solid Waste Management Authority (LCSWMA) is providing this secondary flow report.

The 1st Quarter 2020 Frey Farm Landfill (FFLF) secondary flow was noted at 3.37 gallons per day per acre (gpdpa); which is below the regulatory limit of 100 gpdpa. The 1st Quarter 2020 secondary flow was 1.09% of the primary flow, which is below the regulatory 10% (maximum). Table 1 indicates this quarter's weekly flow information for the six (6) operational cells at the FFLF, cells 2 and 4 continue to indicate no secondary flow present.

- Consistent with all previous monitoring events, LCSWMA remains well below the secondary leachate flow threshold (100-gpdpa)

Contiguous Landowners:

Attached are the Forms 52, laboratory reports, and a data export excel file for uploading the data into your LandLinks Access database.

Please do not hesitate in contacting me if you have any questions or concerns at dbrown@lcswma.org.

Respectfully submitted,

Daniel A. Brown
Environmental Compliance Manager

Re: LCSWMA Frey Farm Landfill
Permit No. 101389
Manor Township
Lancaster County, Pennsylvania
First Quarter 2020 Water Quality Data Review
ARM Project 190783

Dear Mr. Brown:

ARM Group LLC (ARM) has prepared this assessment at the request of the Lancaster County Solid Waste Management Authority (LCSWMA) to evaluate the First Quarter 2020 water quality monitoring results for Frey Farm Landfill (FFLF). As part of this evaluation, ARM reviewed the historic and First Quarter 2020 laboratory analytical results for the sampled upgradient and downgradient Form 19 groundwater monitoring wells, Form 50 leachate collection and detection zones, and Form 52 contiguous private wells.

The groundwater and leachate samples collected by LCSWMA during the First Quarter 2020 were analyzed for quarterly Form 19, Form 50, and Form 52 parameters, as applicable. The following narrative provides a summary of noteworthy observations of the results for the First Quarter of 2020, as well as a general discussion of recent data trends.

Background/Upgradient Parameter Concentrations

To determine if the concentration of a given parameter at each groundwater monitoring location is elevated compared to the background/upgradient concentration, ARM calculated the 95% upper prediction limits (UPLs) using historical data from the upgradient well, FFMP002W (MP-2), using laboratory analytical results provided by LCSWMA from the First Quarter 2009 through the most recent quarter (First Quarter 2020).

The UPL approach is used to predict the upper limit of possible future values based on a background data set. A 95% UPL established from background data represents the upper limit which will predict if an independently obtained future sample result exceeds background levels with 95% confidence. If the concentration of a given parameter in a downgradient well exceeds its established UPL, this represents a statistically significant exceedance of background groundwater quality.

To calculate the UPLs, ARM first applied the Dixon's and Rosner's Tests for outliers in ChemStat® statistical analysis software (version 6.3.0.2, Starpoint Software, Inc., ©1996-2013) to identify potential historical anomalous concentrations in MP-2. The Dixon's Test applies to populations of 3-25 values, and the Rosner's Test is valid for populations of more than 25 values. ARM identified 44 statistical outliers at a 95% significance level in the historical dataset which did not appear to be part of a long-term concentration trend. No outliers were identified from the First Quarter 2020 analytical results.

The most appropriate method of calculating a UPL varies according to the distribution of each dataset. After removing outliers, ARM assessed the remaining historical MP-2 concentration data for each parameter to determine the best fitting statistical distribution (i.e., normal, lognormal, gamma or no distribution) at a 95% significance level using the EPA's ProUCL statistical analysis software (version 5.1.002, EPA, 2015). ARM then used ProUCL to calculate the 95% UPLs for each parameter, which are summarized in the enclosed **Attachment 1**. The exported ProUCL statistical calculation sheets are included in the enclosed **Attachment 2**.

For pH, a one-sided UPL is not appropriate because of the double-sided nature of this parameter. ARM assessed the downgradient pH data by investigating time-series concentration plots for identifiable trends and comparing the First Quarter 2020 results to the historical range of concentrations in both the sampled well and the upgradient well.

The Interstate Technology and Regulatory Council (ITRC) recommends that a UPL should only be applied for background populations of at least 8-10 observations. Use of smaller populations containing either fewer measurements or multiple non-detections can result in skewed datasets and statistically flawed UPL calculations.

The background population is less than 8 for all volatile organic compounds (VOCs), chemical oxygen demand (COD), and total phenolics because of a historical lack of detections in MP-2. A background level could therefore not be accurately calculated for these parameters, which are labeled with asterisks in the enclosed **Attachment 1**. ARM substituted the laboratory reporting detection limit for the statistical background standard when assessing these parameters in the downgradient wells due to their historical absence in the upgradient groundwater.

The attached **Table 1** summarizes the background exceedances in the downgradient Form 19 wells during the First Quarter 2020. The attached **Table 2** summarizes the background exceedances in the downgradient Form 52 wells during the First Quarter 2020. Background exceedances shown in **Tables 1 and 2** denote a statistically significant increase of concentrations relative to those observed historically in the upgradient well MP-2. Close attention should be paid to results from the monitoring locations with noted water quality changes during future

sampling events to evaluate the presence of any positive or negative trends for the parameters of concern.

Individual Form 19 Well Summary

- MP-2 – No parameters are above the statistical background level in this upgradient well for the First Quarter 2020, indicating that groundwater quality appears relatively stable upgradient of the site. Concentrations of several parameters increased rapidly in 2012 to historical high levels. All these concentrations have returned to apparently stable, long-term trends in line with historical average levels since 2014. pH has fluctuated over a range of approximately 1.0 unit over the past several years but appears to have a steady long-term trend. All other Form 19 analytical parameters appear to be stable and within historical concentration ranges.
- MP-5 – Parameters above background in this well include calcium, chloride, magnesium, sodium, SpC, sulfate, TDS, and total organic carbon (TOC). Concentrations of most of these parameters historically appeared stable until an increase in 2018. These concentrations decreased during 2019 and now generally appear in line with the historical averages. Sulfate appears to be slowly increasing over time with minor fluctuations. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.5 unit higher, on average, while fluctuating over a slightly wider range.
- MP-15 – Iron, magnesium, and turbidity were observed above background in this well. Iron and turbidity levels do not appear to have a consistent trend and fluctuate between values above background level and below lab detection limits with no discernible pattern. Magnesium concentrations appear to be increasing since early 2018. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.6 unit higher, on average, while fluctuating over a slightly wider range.
- MP-16 – Ammonia-N, chloride, magnesium, sodium, sulfate, and TOC levels were observed above background in this well. Concentrations of these parameters appear to have a long-term stable trend with short-term fluctuations. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.7 unit higher than background, on average.
- MP-17 – Parameters observed above background in this well include calcium, chloride, magnesium, manganese, sodium, SpC, sulfate, TDS, and TOC. Concentrations of most of these parameters appear to be increasing over time. Two instances of apparent rapid increases in concentration occurred during 2012 and 2016. After both events, these parameter levels have generally appeared to stabilize. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.7 unit higher than background.
- MP-18 – Parameters observed above background in this well include chloride, magnesium, and sodium. Concentrations of these parameters appeared to spike during the First Quarter 2018 sampling event but have since returned to historical levels. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.4 unit higher, on average.

- MP-19 – Chloride and TOC were observed above background in this well and appear to be increasing slowly in concentration over time. pH appears to mimic the trend observed in the upgradient well at levels approximately 1.4 units higher, on average.
- MP-25 – Chloride, magnesium, sodium, and TOC levels were observed above background in this well. Concentrations of these parameters appear to be fluctuating rapidly over time with a long-term, slowly increasing trend. pH appears to be increasing slowly since 2016 and is currently approximately 1.7 units higher than background.
- MP-28 – Parameters observed above background in this well include chloride, magnesium, and sodium. Chloride and sodium concentrations appear to be elevated yet stable over time. Magnesium concentrations appear to be decreasing as a long-term trend with occasional fluctuations. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.5 unit higher, on average, while fluctuating over a slightly wider range.
- MP-29 – Chloride and sodium levels were observed above background in this well. Chloride appears to fluctuate between 20-160 mg/L in a seasonal pattern, but there does not appear to be a long-term increasing or decreasing trend. Sodium levels appear to mimic the chloride fluctuation pattern between approximately 8-45 mg/L. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.4 unit higher, on average.
- MP-2DW – Parameters observed above background in this well include calcium, chloride, iron, magnesium, manganese, sodium, SpC, TDS, and turbidity. These parameter concentrations appear to be increasing between the Third Quarter 2017 and Fourth Quarter 2018 sampling events. They generally appear to have stabilized, apart from minor fluctuations, during the last several quarters. pH appears to mimic the trend observed in the upgradient well at levels approximately 2.0 units higher, on average.
- MP-2SW – Parameters observed above background in this well include chloride, iron, sodium, TOC, and turbidity. Chloride and sodium levels appear to be decreasing over time. Iron, TOC, and turbidity appear to be fluctuating over relatively wide concentration ranges with an apparent slowly increasing long-term trend. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.6 unit higher, on average.
- MP-31 – Iron and turbidity were observed above background in this well. These parameter concentrations appear to be increasing slowly since the First Quarter 2018 sampling event. pH appears to mimic the trend observed in the upgradient well at levels approximately 2.0 units higher, on average, while fluctuating over a wider range.
- MP-32 – Parameters observed above background in this well include ammonia-N, iron, manganese, and turbidity. Ammonia-N appears to be decreasing over time with occasional concentration fluctuations. Iron, manganese, and turbidity appear to be fluctuating rapidly but do not appear to show a long-term increasing or decreasing trend. pH appears to mimic the trend observed in the upgradient well at levels approximately 1.7 units higher, on average, while fluctuating over a wider range.

- MP-33 – Parameters observed above background in this well include ammonia-N, chloride, iron, manganese, and turbidity. Chloride appears to be fluctuating seasonally with a long-term, slowly increasing trend. The other noted parameter concentrations appear to be fluctuating but do not appear to show a long-term increasing or decreasing trend. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.8 unit higher, on average.
- MP-3A – Magnesium levels were observed above background in this well but appear to be steady long-term. pH appears to be increasing slowly over time and is currently approximately 1.0 unit higher than background.
- MP-4A – Parameters observed above background in this well include alkalinity (bicarbonate and total), calcium, chloride, magnesium, sodium, SpC, and TDS. All these parameter concentrations appear to be either stable over time or decreasing. Calcium and TDS levels appear to be fluctuating within their long-term trends. pH appears to mimic the trend observed in the upgradient well at levels approximately 1.8 units higher, on average, while fluctuating over a slightly wider range.
- MP-26R – Parameters observed above background in this well include calcium, chloride, magnesium, manganese, potassium, sodium, SpC, sulfate, TDS, and TOC. Most of these parameters appear to be increasing slowly since 2014. Sulfate and TOC appear to be fluctuating but not increasing long-term. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.3 unit higher, on average.
- MP-30R – Parameters observed above background in this well include chloride, magnesium, manganese, sodium, SpC, and TDS. These parameter concentrations appear to be fluctuating across a relatively wide range of values with no apparent long-term trends. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.5 unit higher, on average, while fluctuating over a wider range.

Parameters not noted above are either at or below background levels. Overall, the groundwater quality at FFLF appears to be stable. Most parameters noted as being elevated above background levels do not appear to be increasing over time. Several parameters appear to be fluctuating but do not show an apparent long-term increasing or decreasing trend. ARM will continue to closely assess the noted parameters with increasing trends to see if any changes to the trends occur over time.

Form 50 Leachate Zone Summary

ARM reviewed the historic and First Quarter 2020 laboratory analytical results for sample location FFLEINFS (grab samples collected from the combined flow from FFLF's primary leachate collection lines) and four (4) manholes which represent the secondary leachate detection zones (FFMH01SS, FFMH03SS, FFMH05SS, and FFMH06SS).

Leachate flows in the primary and secondary zones appear to be generally stable over time apart from occasional fluctuations. Flows from the secondary zones appear to fluctuate seasonally, with the highest flows generally occurring in the first quarter and the lowest flows generally occurring in the third quarter.

Form 50 VOC Detections and Apparent Trends

2-butanone (MEK) and acetone were observed in FFLEINS in the First Quarter 2020 and have been historically present in the primary leachate samples. These VOC concentrations do not appear to be increasing over time.

1,1-dichloroethane, 1,4-dichlorobenzene, acetone, ethylbenzene, and xylenes were observed in FFMH01SS and have historically been present at low levels. 1,4-dichlorobenzene levels appear to be very slowly increasing over time, and the other noted VOC concentrations appear to be stable or decreasing.

Acetone was observed in FFMH03SS and has historically been present at levels between approximately 10-30 µg/l, although concentrations do not appear to be increasing over time.

Other Form 50 Detections and Apparent Trends

Ammonia-N, barium, chloride, iron, pH, potassium, sodium, and TOC levels appear to be increasing long-term at FFLEINFS and FFMH01SS. COD, nitrate-N, SpC, sulfate, TDS, and TOC appear to be decreasing at FFMH05SS. Alkalinity, calcium, magnesium, and manganese concentrations fluctuate across a wide range of values in the historical leachate results, but no long-term trends are apparent for these parameters. ARM will continue to closely assess the noted parameters with increasing trends to see if any changes to the trends occur over time.

Form 50 MCL Exceedances and Form 19 Subtitle D Parameter Analysis

Form 19 groundwater monitoring wells are subject to additional analysis of Subtitle D parameters at the next scheduled annual sampling event if secondary leachate samples collected from an upgradient cell are found to exceed the primary maximum contaminant limit (MCL) of a regulated compound. For the First Quarter 2020, the analyses for the secondary leachate samples collected from FFMH03SS and FFMH05SS resulted in MCL exceedances for nitrate-N. All downgradient wells should therefore be sampled for Subtitle D Form 19 parameters at the next annual sampling event.

Form 52 Contiguous Private Wells Summary

ARM reviewed the historic and First Quarter 2020 groundwater monitoring results for ten (10) contiguous privately-owned wells. Samples collected from these wells were analyzed for Form 52 parameters. The attached **Table 2** summarizes the background exceedances in the downgradient Form 52 wells during the First Quarter 2020. Background exceedances shown in **Table 2** denote a statistically significant increase of concentrations relative to those observed historically in the upgradient well MP-2.

- 3044RIVERRD – Parameters observed above background in this well include ammonia-N, total and dissolved magnesium, and dissolved potassium. Ammonia-N has been detected sporadically in this well since 2014 but does not appear to be increasing consistently over time. Magnesium and potassium levels appear to be stable and not increasing over time. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.6 unit higher, on average, while fluctuating over a slightly wider range.

Methylene chloride was detected at 1.2 µg/L in this well during the Fourth Quarter 2019 sampling event. Because this was the first historical detection at 3044RIVERRD and this parameter was not detected in First Quarter 2020 sampling results, ARM suspects that the Fourth Quarter 2019 detection was anomalous.

- 3052RIVERRD – No parameters were observed above background in this well. pH appears to be slowly increasing since 2017 and is currently approximately 0.6 unit higher than background.
- 3056RIVERRD – Parameters observed above background in this well include total and dissolved magnesium and dissolved potassium. Concentrations of both parameters appear to be stable and not increasing over time. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.1 unit higher, on average, while fluctuating over a slightly wider range.
- 3060RIVERRD – Dissolved potassium was observed above background in this well but appears to be stable long-term. Turbidity was also slightly above background, but this does not appear to be a historically consistent issue in this well. pH appears to mimic the trend observed in the upgradient well at nearly identical levels, on average, while fluctuating over a slightly wider range.
- 3076RIVERRD – Parameters above background in this well include chloride, dissolved potassium, and total and dissolved sodium. Chloride and sodium levels appear to be stable and not increasing over time. Potassium levels appear to be trending toward an increase since the First Quarter 2019. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.3 unit higher, on average.
- 3079RIVERRD – Parameters above background in this well include chloride and dissolved potassium. Chloride levels fluctuate in an apparently seasonal manner but do not appear to be trending toward an increase over time. Potassium levels appear to be trending toward an

increase since the First Quarter 2019. pH appears to be slowly increasing since 2017 and is currently approximately 1.2 units higher than background.

- 3088RIVERRD – Parameters observed above background in this well include total and bicarbonate alkalinity, chloride, dissolved potassium, total and dissolved sodium, SpC, and TDS. ARM understands that the property owner at this location installed a water treatment system in 2013 which coincides with several significant changes in parameter concentrations and trends. Notably, alkalinity, chloride, sodium, SpC, and TDS levels increased rapidly, and calcium, magnesium, potassium, and sulfate levels decreased rapidly during 2013. Nitrate-N concentrations initially decreased by about 50% during 2013 but have returned to historical average levels, fluctuating between approximately 7-14 mg/L. pH appears to mimic the trend observed in the upgradient well at levels approximately 1.6 units higher, on average, while fluctuating over a slightly wider range.
- 3100RIVERRD – Chloride was observed above background in this well, but concentrations appear to be stable and not increasing over time. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.5 unit higher, on average.
- 3106RIVERRD – Chloride, magnesium, and sodium were observed above background in this well. Concentrations of all these parameters appear to be trending toward an increase since the First Quarter 2019. Since late 2015, pH appears to mimic the trend observed in the upgradient well at levels approximately 1.1 units higher, on average.
- 3125RIVERRD – Parameters observed above background in this well include total and bicarbonate alkalinity, chloride, dissolved potassium, total and dissolved sodium, SpC, and TDS. Chloride levels fluctuate in an apparently seasonal manner but do not appear to be trending toward an increase over time. Sodium, SpC, and TDS levels appear to be decreasing since the Second Quarter 2018. Total and bicarbonate alkalinity and potassium levels began to increase during the Second, Third, and Fourth Quarters 2018 and remain elevated above background levels. pH also appears to be increasing since early 2018 and is currently approximately 2.2 units higher than background.

Form 52 parameters not noted above are either at or below background levels. ARM will continue to assess the noted apparent trends in the Form 52 results to see if any changes in the trends develop.

Closing

If you have any questions regarding this water quality data evaluation, please contact the undersigned at 717-533-8600. ARM sincerely appreciates the opportunity to assist LCSWMA with its assessment of quarterly water quality data collected at FFLF.

Sincerely,
ARM Group LLC

| Turbidity | Lognormal | 1.704 | NTU |
| Vinyl Chloride | NA | 1* | µg/L |
| Total Xylenes | NA | 3* | µg/L |

Notes:

"NA" denotes parameter not detected or not enough detections in MP-2 over course of historical data to develop tolerance limits.

* Reporting limit substituted for background standard due to lack of historical detections.

** One-sided background standards are not appropriate for pH. Other analysis used in report.

| 232 | 95% USL | | | | | 182 | 95% KM Chebyshev UPL | | | | | 201 |
| 233 | | | | | | | | | | | | |
| 234 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 235 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 236 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 237 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 238 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

| 439 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | |
| 440 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | |
| 441 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | |
| 442 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | |
| 443 | This is especially true when the sample size is small. | | | | | | | | | | | |
| 444 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | |

| 854 | | | | | | | | | | | | |
| 855 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 856 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 857 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 858 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 859 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

| 983 | | | | | | | | | | | | |
| 984 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 985 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 986 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 987 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 988 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

| 1901 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | |
| 1902 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | |
| 1903 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | |
| 1904 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | |
| 1905 | This is especially true when the sample size is small. | | | | | | | | | | | |
| 1906 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | |
| 1907 | | | | | Minimum | 0.193 | | | | Mean | | 0.652 |

| 1973 | | | | | | | | | | | | |
| 1974 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 1975 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 1976 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 1977 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 1978 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

| 2108 | | | | | | | | | | | | |
| 2109 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | |
| 2110 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | |
| 2111 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | |
| 2112 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | |
| 2113 | This is especially true when the sample size is small. | | | | | | | | | | | |
| 2114 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | |
| 2115 | | | | | Minimum | 0.01 | | | | | Mean | 0.681 |

| 2171 | DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons. | | | | | | | | | | | |
| 2172 | | | | | | | | | | | | |
| 2173 | Nonparametric Distribution Free Background Statistics | | | | | | | | | | | |
| 2174 | Data appear to follow a Discernible Distribution at 5% Significance Level | | | | | | | | | | | |
| 2175 | | | | | | | | | | | | |
| 2176 | Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects) | | | | | | | | | | | |
| 2177 | Order of Statistic, r | | | | 44 | | 95% UTL with95% Coverage | | | | 5.48 | |
| 2178 | Approx, f used to compute achieved CC | | | | 1.158 | | Approximate Actual Confidence Coefficient achieved by UTL | | | | 0.665 | |
| 2179 | Approximate Sample Size needed to achieve specified CC | | | | 93 | | 95% UPL | | | | 4.817 | |
| 2180 | 95% USL | | | | 10.1 | | 95% KM Chebyshev UPL | | | | 8.104 | |
| 2181 | | | | | | | | | | | | |
| 2182 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 2183 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 2184 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 2185 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 2186 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WASTE MANAGEMENT

Date Prepared/Revised
03/18/2020

DEP USE ONLY

Date Received

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: FFMP015W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County

Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 36.43 " Longitude: 76 ° 27 ' 10.82 "

Depth to Water Level: 61.09 ft Measured from: Land Surface TOC

Casing Stickup: 1.90 ft Elevation of Water Level: 515.31 ft./MSL

Sampling Depth: 135 ft Volume of Water Column: 128.96 gal

Total Well Depth: 148.9 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 1.6

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 2/17/2020 Sample Collection Time: 10:25

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3086978001 Final Lab Analysis CompletionDate: 2/25/2020

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Comments: _____

I.D. No 101389

Monitoring Point No. FFMP015W

Sample Date 2/17/2020

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: FFMP033W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County Municipality: MANOR TOWNSHIP

Sampling Point: Latitude: 39 ° 57 ' 31.09 " Longitude: 76 ° 27 ' 4.98 "

Depth to Water Level: 17.79 ft Measured from: Land Surface TOC

Casing Stickup: 0.49 ft Elevation of Water Level: 498.73 ft./MSL

Sampling Depth: 79 ft Volume of Water Column: 114.86 gal

Total Well Depth: 96 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 0.8

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 2/17/2020 Sample Collection Time: 11:47

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3086978002 Final Lab Analysis CompletionDate: 2/25/2020

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D^o MM' SS.S")

Monitoring Point Number: FFMP019W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County

Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 11.58 " Longitude: 76 ° 27 ' 5.75 "

Depth to Water Level: 25.8 ft Measured from: Land Surface TOC

Casing Stickup: 1.79 ft Elevation of Water Level: 446.15 ft./MSL

Sampling Depth: 49 ft Volume of Water Column: 69.84 gal

Total Well Depth: 132.79 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 2.6

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 2/18/2020 Sample Collection Time: 11:26

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3087135003 Final Lab Analysis CompletionDate: 2/26/2020

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: FFMP30RW Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County

Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 15.52 " Longitude: 76 ° 27 ' 26.8 "

Depth to Water Level: 32.78 ft Measured from: Land Surface TOC

Casing Stickup: 2.20 ft Elevation of Water Level: 529.52 ft./MSL

Sampling Depth: 85 ft Volume of Water Column: 84.04 gal

Total Well Depth: 90 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 1.6

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 2/19/2020 Sample Collection Time: 10:17

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3087427001 Final Lab Analysis CompletionDate: 2/26/2020

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Comments: _____

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D^o MM' SS.S")

Monitoring Point Number: FFMP002W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 32.25 " Longitude: 76 ° 27 ' 24.03 "

Depth to Water Level: 62.79 ft Measured from: Land Surface TOC

Casing Stickup: 1.60 ft Elevation of Water Level: 550.41 ft./MSL

Sampling Depth: 85 ft Volume of Water Column: 156.87 gal

Total Well Depth: 169.6 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 0.6

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 2/20/2020 Sample Collection Time: 10:11

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3087711001 Final Lab Analysis Completion Date: 2/27/2020

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Comments: _____

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Frey Farm Landfill

Facility ID (as issued by DEP): 101389

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: FFMP02SW Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County

Municipality: MANOR TOWNSHIP

Sampling Point: Latitude: 39 ° 57 ' 27.9 " Longitude: 76 ° 27 ' 1.58 "

Depth to Water Level: 14.51 ft Measured from: Land Surface TOC

Casing Stickup: _____ ft Elevation of Water Level: 495.39 ft./MSL

Sampling Depth: 18 ft Volume of Water Column: _____ gal

Total Well Depth: 25 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 0.4

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: _____ gpm

Sample Date (mm/dd/yy): 2/20/2020 Sample Collection Time: 13:48

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Certificate of Analysis

| | | | |
|-----------------|------------------|---------------|-----------------------------------|
| Project Name: | FREY FARM | Workorder: | 3087711 |
| Purchase Order: | PO1000126 | Workorder ID: | 1ST QTR 2020 GWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Thursday, February 20, 2020.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3087711 1ST QTR 2020 GWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3087711 1ST QTR 2020 GWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-------------|-------------------|-------------------|
| 3087711001 | 3 | FFMP002W | EPA 300.0 | Nitrate-N |
| The sample was originally run within hold time, but required further analysis that exceeded hold time. | | | | |
| 3087711001 | 4 | FFMP002W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711001 | 5 | FFMP002W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711002 | 3 | FFMP032W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711002 | 4 | FFMP032W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711003 | 3 | FFMP025W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711003 | 4 | FFMP025W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711004 | 3 | FFMP02DW | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711004 | 4 | FFMP02DW | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711005 | 3 | FFMP02SW | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711005 | 4 | FFMP02SW | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711006 | 3 | FFMP016W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711006 | 4 | FFMP016W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3087711007 | 3 | FIELD BLANK | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087711007 | 4 | FIELD BLANK | SM2320B-2011 | Alkalinity, Total |

Condition of Sample Receipt Form

Client: LCSWMA Work Order #: 308771 Initials: CD Date: 2/20/2020

1. Were airbills / tracking numbers present and recorded?..... NONE YES NO
 Tracking number: _____
2. Are Custody Seals on shipping containers intact?..... NONE YES NO
3. Are Custody Seals on sample containers intact?..... NONE YES NO
4. Is there a COC (Chain-of-Custody) present?..... YES NO
5. Are the COC and bottle labels complete, legible and in agreement?..... YES NO
 - 5a. Does the COC contain sample locations?..... YES NO
 - 5b. Does the COC contain date and time of sample collection for all samples?..... YES NO
 - 5c. Does the COC contain sample collectors name?..... YES NO
 - 5d. Does the COC note the type(s) of preservation for all bottles?..... YES NO
 - 5e. Does the COC note the number of bottles submitted for each sample?..... YES NO
 - 5f. Does the COC note the type of sample, composite or grab?..... YES NO
 - 5g. Does the COC note the matrix of the sample(s)?..... YES NO
6. Are all aqueous samples requiring preservation preserved correctly?..... N/A YES NO
7. Were all samples placed in the proper containers for the requested analyses, with sufficient volume?..... YES NO
8. Are all samples within holding times for the requested analyses?..... YES NO
9. Were all sample containers received intact and headspace free when required? (not broken, leaking, frozen, etc.)..... YES NO
10. Did we receive trip blanks (applies only for methods EPA 504, EPA 524.2 and 1631E (LL Hg)?..... N/A YES NO
11. Were the samples received on ice?..... YES NO
12. Were sample temperatures measured at 0.0-6.0°C..... YES NO
13. Are the samples DW matrix ? If YES, fill out Reportable Drinking Water questions below..... YES NO
 - 13a. Are the samples required for SDWA compliance reporting?..... N/A YES NO
 - 13b. Did the client provide a SDWA PWS ID#?..... N/A YES NO
 - 13c. Are all aqueous unpreserved SDWA samples pH 5-9?..... N/A YES NO
 - 13d. Did the client provide the SDWA sample location ID/Description?..... N/A YES NO
 - 13e. Did the client provide the SDWA sample type (D, E, R, C, P, S)?..... N/A YES NO

Certificate of Analysis

| | | | |
|-----------------|------------------|---------------|-----------------------------------|
| Project Name: | FREY FARM | Workorder: | 3087427 |
| Purchase Order: | PO1000126 | Workorder ID: | 1ST QTR 2020 GWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Wednesday, February 19, 2020.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3087427 1ST QTR 2020 GWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3087427 1ST QTR 2020 GWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|-------------------|
| 3087427001 | 1 | FFMP30RW | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087427001 | 2 | FFMP30RW | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087427002 | 1 | FFMP04AW | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087427002 | 2 | FFMP04AW | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087427003 | 1 | FFMP03AW | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087427003 | 2 | FFMP03AW | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087427003 | 3 | FFMP03AW | EPA 300.0 | Nitrate-N |
| The sample was originally run within hold time, but required further analysis that exceeded hold time. | | | | |
| 3087427004 | 1 | FFMP031W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087427004 | 2 | FFMP031W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |

| Purchase Order: | PO1000126 | Workorder ID: | 1ST QTR 2020 GWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Tuesday, February 18, 2020.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

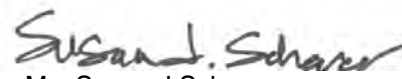

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

SAMPLE SUMMARY

Workorder: 3087135 1ST QTR 2020 GWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3087135 1ST QTR 2020 GWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|--------------------------|
| 3087135001 | 1 | FFMP017W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087135001 | 2 | FFMP017W | S2540C-11 | Total Dissolved Solids |
| The QC sample type DUP for method S2540C-11 was outside the control limits for the analyte Total Dissolved Solids. The RPD was reported as 10.5 and the upper control limit is 5. | | | | |
| 3087135001 | 3 | FFMP017W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087135002 | 1 | FFMP018W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087135002 | 2 | FFMP018W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087135003 | 1 | FFMP019W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087135003 | 2 | FFMP019W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3087135004 | 1 | FFMP029W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3087135004 | 2 | FFMP029W | SW846 8260B | 1,1-Dichloroethene |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,1-Dichloroethene. The % Recovery was reported as 145 and the control limits were 63 to 128. | | | | |
| 3087135004 | 3 | FFMP029W | SW846 8260B | 1,1-Dichloroethene |
| The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte 1,1-Dichloroethene. The % Recovery was reported as 134 and the control limits were 63 to 128. | | | | |
| 3087135004 | 4 | FFMP029W | SW846 8260B | Methylene Chloride |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Methylene Chloride. The % Recovery was reported as 126 and the control limits were 76 to 121. | | | | |
| 3087135004 | 5 | FFMP029W | SW846 8260B | trans-1,2-Dichloroethene |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 141 and the control limits were 71 to 122. | | | | |
| 3087135004 | 6 | FFMP029W | SW846 8260B | trans-1,2-Dichloroethene |
| The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 130 and the control limits were 71 to 122. | | | | |
| 3087135004 | 7 | FFMP029W | SW846 8260B | 1,1-Dichloroethane |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,1-Dichloroethane. The % Recovery was reported as 133 and the control limits were 78 to 124. | | | | |
| 3087135004 | 8 | FFMP029W | SW846 8260B | cis-1,2-Dichloroethene |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte cis-1,2-Dichloroethene. The % Recovery was reported as 128 and the control limits were 78 to 125. | | | | |

ANALYTICAL RESULTS

Workorder: 3087135 1ST QTR 2020 GWMP-FORM 19Q

3087135004 9 FFMP029W SW846 8260B 1,1,1-Trichloroethane
 The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,1,1-Trichloroethane. The % Recovery was reported as 131 and the control limits were 66 to 130.

3087135004 10 FFMP029W SW846 8260B Benzene
 The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Benzene. The % Recovery was reported as 129 and the control limits were 80 to 124.

3087135004 11 FFMP029W SW846 8260B Trichloroethene
 The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Trichloroethene. The % Recovery was reported as 128 and the control limits were 77 to 124.

3087135004 12 FFMP029W SM2320B-2011 Alkalinity, Total
 The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L.

3087135005 1 FFMP26RW S4500HB-11 pH
 The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.

3087135005 2 FFMP26RW SM2320B-2011 Alkalinity, Total
 The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L.

3087135006 1 FFMP005W S4500HB-11 pH
 The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory.

3087135006 2 FFMP005W SM2320B-2011 Alkalinity, Total
 The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L.

| Project Name: | FREY FARM | Workorder: | 3086978 |
| Purchase Order: | PO1000126 | Workorder ID: | 1ST QTR 2020 GWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Monday, February 17, 2020.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3086978 1ST QTR 2020 GWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

Condition of Sample Receipt Form

Client: LCSWMA Work Order #: 3086978 Initials: CO Date: 2/17/2020

1. Were airbills / tracking numbers present and recorded?..... NONE YES NO
Tracking number: _____
2. Are Custody Seals on shipping containers intact?..... NONE YES NO
3. Are Custody Seals on sample containers intact?..... NONE YES NO
4. Is there a COC (Chain-of-Custody) present?..... YES NO
5. Are the COC and bottle labels complete, legible and in agreement?..... YES NO
 - 5a. Does the COC contain sample locations?..... YES NO
 - 5b. Does the COC contain date and time of sample collection for all samples?..... YES NO
 - 5c. Does the COC contain sample collectors name?..... YES NO
 - 5d. Does the COC note the type(s) of preservation for all bottles?..... YES NO
 - 5e. Does the COC note the number of bottles submitted for each sample?..... YES NO
 - 5f. Does the COC note the type of sample, composite or grab?..... YES NO
 - 5g. Does the COC note the matrix of the sample(s)?..... YES NO
6. Are all aqueous samples requiring preservation preserved correctly?¹ N/A YES NO
7. Were all samples placed in the proper containers for the requested analyses, with sufficient volume?..... YES NO
8. Are all samples within holding times for the requested analyses?..... Ph is enamel YES NO
9. Were all sample containers received intact and headspace free when required? (not broken, leaking, frozen, etc.)..... YES NO
10. Did we receive trip blanks (applies only for methods EPA 504, EPA 524.2 and 1631E (LL Hg)?..... N/A YES NO
11. Were the samples received on ice?..... YES NO
12. Were sample temperatures measured at 0.0-6.0°C..... YES NO
13. Are the samples DW matrix ? If YES, fill out Reportable Drinking Water questions below..... YES NO
 - 13a. Are the samples required for SDWA compliance reporting?..... N/A YES NO
 - 13b. Did the client provide a SDWA PWS ID#?..... N/A YES NO
 - 13c. Are all aqueous unpreserved SDWA samples pH 5-9?..... N/A YES NO
 - 13d. Did the client provide the SDWA sample location ID/Description?..... N/A YES NO
 - 13e. Did the client provide the SDWA sample type (D, E, R, C, P, S)?..... N/A YES NO

| Project Name: | FREY FARM | Workorder: | 3086975 |
| Purchase Order: | PO1000126 | Workorder ID: | 1st QTR 2020 GWMP-FORM 8 |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Monday, February 17, 2020.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

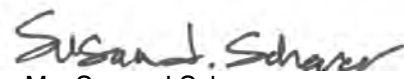

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3086975 1st QTR 2020 GWMP-FORM 8

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3086975 1st QTR 2020 GWMP-FORM 8

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|-------------------|
| 3086975001 | 1 | FFMP034W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3086975001 | 2 | FFMP034W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3086975001 | 3 | FFMP034W | SW846 9066 | Phenolics |
| The QC sample type MSD for method 420.4/9066 was outside the control limits for the analyte Phenolics. The RPD was reported as 10.6 and the upper control limit is 10. | | | | |
