Ms. Kelly Lee Kinkaid PG; Licensed Professional Geologist
Pennsylvania Department of Environmental Protection
Bureau of Waste Management
909 Elmerton Avenue
Harrisburg, PA 17110-8200

REF: Creswell Landfill (BWM Permit #100008)
Groundwater Monitoring; 1st Quarter 2021

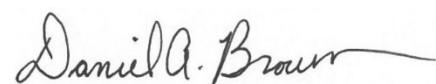

Dear Ms. Kinkaid:

Enclosed are the Form 19 reports for the sampling period completed at the above referenced facility. The laboratory results are being reviewed by ARM Group to evaluate the quality of the data and historic trends. This review will be submitted upon completion.

- This sampling event was for the "Quarterly" Form 19 parameters, all the thirteen (13) GWMP locations were sampled.

Please do not hesitate in contacting me if you have any questions or concerns at dbrown@lcswma.org.

Respectfully Submitted,

A handwritten signature in black ink that reads "Daniel A. Brown". The signature is written in a cursive, flowing style.

Re: LCSWMA Creswell Landfill
Permit No. 100008
Manor Township, Lancaster County, Pennsylvania
First Quarter 2021 Water Quality Data Review
ARM Project 190848

Dear Mr. Brown:

ARM Group LLC (ARM) has prepared this assessment at the request of the Lancaster County Solid Waste Management Authority (LCSWMA) to provide an evaluation of the First Quarter 2021 water quality monitoring results for Creswell Landfill (CWLF). As part of this evaluation, ARM reviewed the historic and First Quarter 2021 laboratory analytical results for the sampled upgradient and downgradient Form 19 groundwater monitoring wells and surface water monitoring points.

The groundwater and surface water samples collected by LCSWMA during the First Quarter 2021 were analyzed for quarterly Form 19 parameters. The following narrative provides a summary of noteworthy observations of the results for the First Quarter 2021, as well as a general discussion of recent data trends.

Background/Upgradient Parameter Concentrations

To determine if the concentration of a given parameter at each monitoring location is elevated compared to the background/upgradient concentration, ARM calculated the 95% upper prediction limits (UPLs) using historical data from the upgradient well, CWMP001W, using laboratory analytical results from the Fourth Quarter 1987 through the most recent quarter (First Quarter 2021).

The UPL approach is used to predict the upper limit of possible future values based on a background data set. A 95% UPL established from background data represents the upper limit which will predict if an independently obtained future sample result exceeds background levels with 95% confidence. If the concentration of a given parameter in a downgradient well exceeds its established UPL, this represents a statistically significant exceedance of background groundwater quality.

To calculate the UPLs, ARM first applied the Rosner's Test for outliers in ChemStar® statistical analysis software (version 6.3.0.2, Starpoint Software, Inc., ©1996-2013) to identify potential historical anomalous concentrations in MP-1. ARM previously identified 82 statistical outliers at a 95% significance level in the historical dataset which did not appear to be part of a long-term concentration trend. The First Quarter 2021 analytical result in MP-1 for field specific conductance [SPC (f)] (394 µmhos/cm) was determined to be a statistical outlier at 95% significance and was removed from the UPL calculation.

The most appropriate method of calculating a UPL varies according to the distribution of each dataset. After removing outliers, ARM assessed the remaining historical MP-1 concentration data for each parameter to determine the best fitting statistical distribution (i.e., normal, lognormal, gamma or no distribution) at a 95% significance level using the EPA's ProUCL statistical analysis software (version 5.1.002, EPA, 2015). ARM then used ProUCL to calculate the UPLs for each parameter, which are summarized in the enclosed **Attachment 1**. The exported ProUCL statistical calculation sheets are included in the enclosed **Attachment 2**.

For pH, a one-sided UPL is not appropriate because of the double-sided nature of this parameter. ARM assessed the downgradient pH data by investigating time-series concentration plots for identifiable trends and comparing the First Quarter 2021 results to the historical range of concentrations in both the sampled well and the upgradient well.

The Interstate Technology and Regulatory Council (ITRC) recommends that a UPL should only be applied for background populations of at least 8-10 observations. Use of smaller populations containing either fewer measurements or multiple non-detections can result in skewed datasets and statistically flawed UPL calculations. In these cases, ARM substituted the laboratory reporting detection limit for the statistical background standard.

The attached **Table 1** summarizes the background exceedances in the downgradient wells during the First Quarter 2021. Background exceedances shown in **Table 1** denote either (1) a statistically significant increase of concentrations relative to those observed historically in the upgradient well MP-1, or (2) a detection of a parameter for which a statistically valid background standard could not be calculated. Close attention should be paid to results from the monitoring locations with noted water quality changes during future sampling events to evaluate the presence of any positive or negative trends for the parameters of concern.

Individual Well Summary

- MP-1** – All Form 19 analytical parameters appear to be stable and within historical concentration ranges except for field specific conductance [SpC (f)], which exceeded its statistical background standard with a concentration of 394 $\mu\text{mhos/cm}$. This result was determined to be a statistical outlier at 95% significance, and ARM will continue to assess future SpC results to determine if any apparent trends develop. pH appears to have a slightly increasing trend over time.

MP-2 – 1,1-dichloroethane was detected at 13.6 $\mu\text{g/L}$ during this event and is, therefore, above background levels.

Other parameters above background in this well include ammonia-N, alkalinity (bicarbonate and total), total calcium, chemical oxygen demand (COD), chloride, total magnesium, total manganese, total sodium, SpC (f), sulfate, total dissolved solids (TDS), and total organic carbon (TOC). Many of these parameters appear to be slowly increasing over time, except for calcium and 1,1-dichloroethane, which both appear to be decreasing. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.94 unit higher, on average, while fluctuating over a slightly wider range.

MP-3 – 1,1-dichloroethane was detected at 1.4 $\mu\text{g/L}$ during this event and is, therefore, above background levels. Concentrations continue to decrease from the 2006 historical maximum of 20.5 $\mu\text{g/L}$.

Other parameters above background in this well include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total sodium, SpC (f), and sulfate. Sulfate appeared to abruptly increase above the historical average during the Fourth Quarter 2020, but the First Quarter 2021 result appears to show a return to historical average levels. The other noted parameters appear to be increasing over time with short term fluctuations. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.29 unit higher, on average.

MP-4 – Parameters above background in this well include alkalinity (bicarbonate and total), chloride, and sulfate. All noted parameters generally appear to be slowly increasing with short-term fluctuations. pH appears to be slightly decreasing over time with a long-term average value approximately 0.60 unit higher than background.

MP-5 – Parameters above background in this well include alkalinity (bicarbonate and total), chloride, total sodium, SpC (f), laboratory SpC (SpC [I]), and sulfate. Concentrations of alkalinity (bicarbonate and total), chloride, total sodium, and SpC (f) appear to be increasing over time with short-term fluctuations. Sulfate concentrations appear to fluctuate between approximately 2-6 mg/L and appear to be decreasing since July 2019. pH appears to be stable over time with a long-term average value approximately 0.22 unit higher than background.

- **MP-7** – Parameters above background in this well include alkalinity (bicarbonate and total), chloride, total sodium, SPC (f), SPC (l), and sulfate. Concentrations of alkalinity (bicarbonate and total), total sodium, sulfate, and SPC (f) appear to be increasing over time with short-term fluctuations. Chloride and SPC (l) appear to be stable over time. Sulfate concentrations appear to be decreasing since a historical high concentration was noted in the Third Quarter 2020. pH appears to be stable over time with a long-term average value approximately 0.20 unit higher than background.
- **MP-8** – Benzene (1.4 µg/L) and 1,1-dichloroethane (2.8 µg/L) were detected during this event, and are, therefore, above background levels. Concentrations of both parameters appear to be decreasing over time.

- Other parameters above background in this well include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total iron, total manganese, total ammonia-N, alkalinity (bicarbonate and total), total sodium, SPC (f), SPC (l), sulfate, TDS, and TOC. Ammonia-N, alkalinity (bicarbonate and total), total iron, and total manganese appear to be slowly increasing over time. Chloride and total potassium appear to be slowly decreasing over time. Concentrations of the other noted parameters generally appear to be stable long-term, apart from minor fluctuations. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.57 unit higher, on average, while fluctuating over a slightly narrower range.
- **MP-9** – Benzene; 1,1-dichloroethane; and cis 1,2-dichloroethene were detected during this event, and are, therefore, above background levels. Concentrations of both parameters appear to be decreasing over time.

- Other parameters above background in this well include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total iron, total manganese, total ammonia-N, alkalinity (bicarbonate and total), SPC (f), SPC (l), sulfate, TDS, and TOC. Concentrations of alkalinity (bicarbonate and total), chloride, magnesium, sodium, SPC (f) and sulfate appear to be increasing with apparently seasonal fluctuations. Total calcium, SPC (l), and TDS concentrations appear to be stable over time. Concentrations of ammonia-N, COD, total potassium, and TOC appear to be decreasing over time. pH appears to mimic the trend observed in the upgradient well at levels approximately 1.27 units higher, on average.
- **MP-10** – Parameters above background in this well include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total magnesium, total potassium, total sodium, SPC (f), SPC (l), sulfate, TDS, and TOC. Concentrations of alkalinity (bicarbonate and total), chloride, magnesium, sodium, SPC (f) and sulfate appear to be increasing with apparently seasonal fluctuations. Total calcium, SPC (l), and TDS concentrations appear to be decreasing over time. pH appears to be decreasing over time. Concentrations of ammonia-N, COD, total potassium, and TOC appear to be decreasing over time. pH appears to be slightly decreasing over time with a long-term average value approximately 0.92 unit higher than background.

- **MP-12** – Parameters above background in this well include alkalinity (bicarbonate and total, total calcium, total iron, total manganese, SPC (f), sulfate, and TOC. Concentrations of chloride, total iron, and TOC appear to be increasing over time, with iron displaying fluctuations across a relatively wide range (approximately 1-168 mg/L) since 2010.

Concentrations of the other noted parameters generally appear to be decreasing. pH appears to mimic the trend observed in the upgradient well at levels approximately 0.67 units higher, on average.

- MP-16 – Alkalinity (bicarbonate and total) and sulfate were the only parameters detected above background in this well. Concentrations of alkalinity (bicarbonate and total) appear to be stable over time, apart from apparently anomalous results in the Third Quarter 2020. ARM will continue to monitor alkalinity concentrations during the next few sampling events to confirm if this result was indeed anomalous. Sulfate concentrations appear to be stable over time and have been decreasing since a historical maximum concentration of 14.6 mg/L was observed during the Second Quarter 2007. pH appears to be stable over time with a long-term average value approximately 0.68 unit higher than background.

- MP-17S – Surface-water grab samples are taken from Mann's Run at this location and analyzed for Form 19 parameters. Because of its upstream location relative to the majority of CWLF, this sampling point should be interpreted, to some extent, as a background monitoring point for evaluating downstream conditions in Mann's Run (i.e., at MP-18S). Parameters above background levels at MP-17S include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total magnesium, nitrate-N, total sodium, SPC (f), SPC (l), sulfate, TDS, and TOC appear to be decreasing over time, while concentrations of the other noted parameters show a wide range of fluctuation in the historical results and appear to demonstrate increasing long-term trends. Nitrate-N and magnesium concentration fluctuations appear to be seasonal. pH appears to mimic the trend observed in the upgradient well at levels approximately 2.00 units higher, on average, while fluctuating over a slightly wider range.

- MP-18S – Surface-water grab samples are taken from Mann's Run at this downstream location and analyzed for Form 19 parameters. Parameters above background levels at MP-18S include ammonia-N, alkalinity (bicarbonate and total), total calcium, chloride, total magnesium, total manganese, total potassium, total sodium, SPC (f), SPC (l), sulfate, TDS, and TOC. Concentrations of ammonia-N and total potassium appear to be decreasing over time, while concentrations of the other noted parameters show a wide range of fluctuation in the historical results and appear to demonstrate increasing long-term trends. pH appears to mimic the trend observed in the upgradient well at levels approximately 2.47 units higher, on average.

Trend plots for the detected VOCs noted above (benzene and 1,1-dichloroethane) are included in **Attachment 3**. Parameters not noted above are either at or below background levels. Overall, the groundwater quality at CWLF appears to be improving, especially with respect to VOC concentrations. Some metal and ion concentrations (e.g., calcium, sodium, and chloride) appear to be increasing slowly in some wells over time, but these water quality changes are largely gradual. These increases may be the result of temporary changes and do not currently appear to be a cause for concern.

Trip and Field Blank Analyses

One (1) trip blank sample and one (1) field blank sample were received by the laboratory on January 22, 2021. Both trip blank and field blank samples were analyzed for VOCs. The field blank was also analyzed for wet chemistry and metal parameters.

Laboratory analysis of the trip blank and field blank samples was completed on January 26, 2021. The field blank wet chemistry and metals analysis were completed on February 6, 2021. SpC was detected at 2 μ mhos/cm and pH at 5.92 units. No VOC or metal constituents were detected in any of the blank samples.

Closing

If you have any questions regarding this water quality data evaluation, please contact the undersigned at 717-533-8600. ARM appreciates the opportunity to assist LCSWMA with its assessment of quarterly water quality data collected at CWLF.

Sincerely,
ARM Group LLC

| 130 | Approx, f used to compute achieved CC | | | | 1.566 | Approximate Actual Confidence Coefficient achieved by UTL | | | | 0.864 | |
| 131 | Approximate Sample Size needed to achieve specified CC | | | | 153 | 95% UPL | | | | 0.12 | |
| 132 | 95% USL | | | | 0.23 | 95% KM Chebyshev UPL | | | | 0.164 | |
| 133 | | | | | | | | | | | |
| 134 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 135 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 136 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 137 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 138 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |

| 262 | | | | | | | | | | | | |
| 263 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 264 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 265 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 266 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 267 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

| 537 | DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons. | | | | | | | | | | | |
| 538 | | | | | | | | | | | | |
| 539 | Nonparametric Distribution Free Background Statistics | | | | | | | | | | | |
| 540 | Data appear to follow a Discernible Distribution at 5% Significance Level | | | | | | | | | | | |
| 541 | | | | | | | | | | | | |
| 542 | Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects) | | | | | | | | | | | |
| 543 | Order of Statistic, r | | | | 127 | 95% UTL with95% Coverage | | | | 20 | | |
| 544 | Approx, f used to compute achieved CC | | | | 1.671 | Approximate Actual Confidence Coefficient achieved by UTL | | | | 0.894 | | |
| 545 | Approximate Sample Size needed to achieve specified CC | | | | 153 | 95% UPL | | | | 20 | | |
| 546 | 95% USL | | | | 31 | 95% KM Chebyshev UPL | | | | 21.6 | | |
| 547 | | | | | | | | | | | | |
| 548 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | | |
| 549 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | | |
| 550 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | | |
| 551 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | | |
| 552 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | | |

|-----|---|---|---|-----------|---|--|---|---|--------|---|---|
| 677 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 678 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 679 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 680 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 681 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |
| 682 | | | | | | | | | | | |

| 753 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | |
| 754 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | |
| 755 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | |
| 756 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | |
| 757 | This is especially true when the sample size is small. | | | | | | | | | | |
| 758 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | |

| 954 | | | | | | | | | | | |
| 955 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 956 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 957 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 958 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 959 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |

| 1167 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | | | | | |
| 1168 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | | | | | |
| 1169 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | | | | | |
| 1170 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | | | | | |
| 1171 | This is especially true when the sample size is small. | | | | | | | | | | | | | | | |
| 1172 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | | | | | |

| 1374 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | |
| 1375 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | |
| 1376 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | |
| 1377 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | |
| 1378 | This is especially true when the sample size is small. | | | | | | | | | | | |
| 1379 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | |

| 1575 | | | | | | | | | | | |
| 1576 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 1577 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 1578 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 1579 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 1580 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |

| 1917 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | |
| 1918 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | |
| 1919 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | |
| 1920 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | |
| 1921 | This is especially true when the sample size is small. | | | | | | | | | | |
| 1922 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | |

| 2196 | | | | | | | | | | | |
| 2197 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 2198 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 2199 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 2200 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 2201 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |

| 2947 | Gamma ROS Statistics using Imputed Non-Detects | | | | | | | | | | | | | | | |
| 2948 | GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs | | | | | | | | | | | | | | | |
| 2949 | GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20) | | | | | | | | | | | | | | | |
| 2950 | For such situations, GROS method may yield incorrect values of UCLs and BTVs | | | | | | | | | | | | | | | |
| 2951 | This is especially true when the sample size is small. | | | | | | | | | | | | | | | |
| 2952 | For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates | | | | | | | | | | | | | | | |

| 3017 | Approximate Sample Size needed to achieve specified CC | | | | 153 | | | | | 95% UPL | 126.4 |
| 3018 | 95% USL | | | | 169 | | | | | 95% KM Chebyshev UPL | 214.7 |
| 3019 | | | | | | | | | | | |
| 3020 | Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. | | | | | | | | | | |
| 3021 | Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers | | | | | | | | | | |
| 3022 | and consists of observations collected from clean unimpacted locations. | | | | | | | | | | |
| 3023 | The use of USL tends to provide a balance between false positives and false negatives provided the data | | | | | | | | | | |
| 3024 | represents a background data set and when many onsite observations need to be compared with the BTV. | | | | | | | | | | |

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Creswell Landfill

Facility ID (as issued by DEP): 100008

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: CWMP007W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 24.53 " Longitude: 76 ° 26 ' 33.28 "

Depth to Water Level: 5.97 ft Measured from: Land Surface TOC

Casing Stickup: 1.50 ft Elevation of Water Level: 447.43 ft./MSL

Sampling Depth: 33 ft Volume of Water Column: 44.84 gal

Total Well Depth: 36.5 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 2.5

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: gpm

Sample Date (mm/dd/yy): 1/18/2021 Sample Collection Time: 12:02

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3152748001 Final Lab Analysis CompletionDate: 2/3/2021

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Comments: _____

I.D. No 100008

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Creswell Landfill

Facility ID (as issued by DEP): 100008

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: CWMP016W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County Municipality: Manor Township

Sampling Point: Latitude: 39 ° 56 ' 55.57 " Longitude: 76 ° 26 ' 50.59 "

Depth to Water Level: 9.72 ft Measured from: Land Surface TOC

Casing Stickup: 2.53 ft Elevation of Water Level: 302.25 ft./MSL

Sampling Depth: 71 ft Volume of Water Column: _____ gal

Total Well Depth: 78.03 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: 1.6

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: _____ gpm

Sample Date (mm/dd/yy): 1/20/2021 Sample Collection Time: 13:14

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3153342001 Final Lab Analysis Completion Date: 2/3/2021

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Comments: _____

FORM 19
MUNICIPAL WASTE LANDFILL
QUARTERLY AND ANNUAL WATER QUALITY ANALYSES

This form must be fully and accurately completed. All required information must be typed or legibly printed in the spaces provided. If additional space is necessary, identify each attached sheet as Form 19, reference the item number and identify the date prepared. The "date prepared/revised" on any attached sheets needs to match the "date prepared/revised" on this page.

General Reference: Section 273.284
Federal Regulations, Subtitle D: 258.54 and Appendix I to Part 258.

SECTION A. APPLICANT IDENTIFIER

Applicant/permittee: Lancaster County Solid Waste Mana

Site Name: Creswell Landfill

Facility ID (as issued by DEP): 100008

SECTION B. FACILITY INFORMATION

Monitoring Wells must be designed and constructed in accordance with Department Standards. INDICATE THE LATITUDE AND LONGITUDE TO THE NEAREST ONE TENTH OF A SECOND (D° MM' SS.S")

Monitoring Point Number: CWMP003W Well Spring Stream Other
 Upgradient/Upstream Downgradient/Downstream

Location (County): Lancaster County Municipality: Manor Township

Sampling Point: Latitude: 39 ° 57 ' 20.17 " Longitude: 76 ° 26 ' 8.37 "

Depth to Water Level: 100.01 ft Measured from: Land Surface TOC

Casing Stickup: -1.29 ft Elevation of Water Level: 424.20 ft./MSL

Sampling Depth: 100 ft Volume of Water Column: -36.73 gal

Total Well Depth: 75 ft Sampling Method: Pumped Bailed Grab

Well Purged: Yes No Well Volumes Purged: _____

Sample Field Filtered (must be 0.45 micron)?: Yes No

Spring Flow Rate: _____ gpm

Sample Date (mm/dd/yy): 1/22/2021 Sample Collection Time: 10:08

Sample Collector's Name: Mr. Brian G Shade

Sample Collector's Affiliation: ALS

Laboratory(ies) Performing Analysis: ALS Environmental

Were any holding times exceeded?: Yes No If yes, please explain in comments field.

Lab Accreditation Number(s): 22-293

Lab Sample Number(s): 3153814001 Final Lab Analysis CompletionDate: 2/10/2021

Name/Affiliation of Person who Filled Out Form: Daniel A. Brown

Certificate of Analysis

| | |
|-----------------------------------|---|
| Project Name: CRESWELL | Workorder: 3152748 |
| Purchase Order: PO-1000246 | Workorder ID: 1st QTR 2021 CWMP-FORM 19Q |

Dear Ms. Gallagher:

Enclosed are the analytical results for samples received by the laboratory on Monday, January 18, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

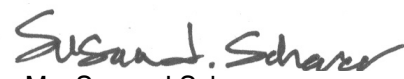

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Mr. Daniel Brown , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3152748 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3152748 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|-------------------|
| 3152748001 | 1 | CWMP007W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3152748001 | 2 | CWMP007W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3152748002 | 1 | CWMP001W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3152748002 | 2 | CWMP001W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Wednesday, March 31, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

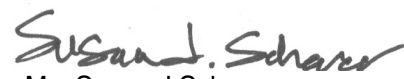

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3166636 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3166636 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|----------------------|
| 3166636001 | 1 | CWMP002W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3166636001 | 2 | CWMP002W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 2.2 umhos/cm. | | | | |
| 3166636001 | 3 | CWMP002W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |

Certificate of Analysis

| | |
|-----------------------------------|---|
| Project Name: CRESWELL | Workorder: 3153814 |
| Purchase Order: PO-1000246 | Workorder ID: 1st QTR 2021 CWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Friday, January 22, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

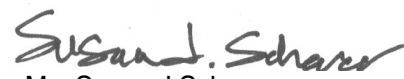

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3153814 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3153814 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|------------------------|
| 3153814001 | 1 | CWMP003W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153814001 | 2 | CWMP003W | SW846 8260B | 1,2,4-Trichlorobenzene |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte 1,2,4-Trichlorobenzene. The % Recovery was reported as 66 and the control limits were 67 to 123. | | | | |
| 3153814001 | 3 | CWMP003W | SW846 8260B | Bromoform |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Bromoform. The % Recovery was reported as 68.7 and the control limits were 70 to 123. | | | | |
| 3153814001 | 4 | CWMP003W | SW846 8260B | Bromoform |
| The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte Bromoform. The % Recovery was reported as 67.9 and the control limits were 70 to 123. | | | | |
| 3153814001 | 5 | CWMP003W | SW846 8260B | 1,2,3-Trichloropropane |
| The QC sample type MSD for method SW846 8260B was outside the control limits for the analyte 1,2,3-Trichloropropane. The % Recovery was reported as 74.3 and the control limits were 75 to 132. | | | | |
| 3153814001 | 6 | CWMP003W | SW846 8260B | Bromomethane |
| The QC sample type MS for method SW846 8260B was outside the control limits for the analyte Bromomethane. The % Recovery was reported as 155 and the control limits were 45 to 148. | | | | |
| 3153814001 | 7 | CWMP003W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3153814001 | 8 | CWMP003W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 2.7 umhos/cm | | | | |
| 3153814002 | 1 | CWMP004W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153814002 | 2 | CWMP004W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3153814002 | 3 | CWMP004W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 2.7 umhos/cm | | | | |
| 3153814002 | 4 | CWMP004W | SW846 9066 | Phenolics |
| The QC sample type MS for method 9066 was outside the control limits for the analyte Phenolics. The % Recovery was reported as 89.8 and the control limits were 90 to 110. | | | | |
| 3153814003 | 1 | CWMP012W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153814003 | 2 | CWMP012W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3153814003 | 3 | CWMP012W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 2.7 umhos/cm | | | | |

| Project Name: | CRESWELL | Workorder: | 3152955 |
| Purchase Order: | PO-1000246 | Workorder ID: | 1st QTR 2021 CWMP-FORM 19Q |

Dear Mr. Brown:

Enclosed are the analytical results for samples received by the laboratory on Tuesday, January 19, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

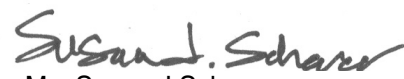

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Ms. Jordan Gallagher , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3152955 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3152955 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|-------------------|
| 3152955001 | 1 | CWMP005W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3152955001 | 2 | CWMP005W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |

Certificate of Analysis

| | |
|-----------------------------------|---|
| Project Name: CRESWELL | Workorder: 3153531 |
| Purchase Order: PO-1000246 | Workorder ID: 1st QTR 2021 CWMP-FORM 19Q |

Dear Ms. Gallagher:

Enclosed are the analytical results for samples received by the laboratory on Thursday, January 21, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

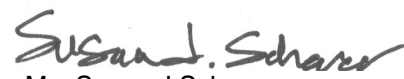

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Mr. Daniel Brown , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer

SAMPLE SUMMARY

Workorder: 3153531 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3153531 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|------------------------------|
| 3153531001 | 1 | CWMP009W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153531001 | 2 | CWMP009W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 1.25 | | | | |
| 3153531001 | 3 | CWMP009W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |
| 3153531002 | 1 | CWMP008W | EPA 410.4 | Chemical Oxygen Demand (COD) |
| The QC sample type MSLO for method EPA 410.4 was outside the control limits for the analyte Chemical Oxygen Demand (COD). The % Recovery was reported as 115 and the control limits were 90 to 110. | | | | |
| 3153531002 | 2 | CWMP008W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153531002 | 3 | CWMP008W | SW846 9050A | Specific Conductance |
| The Method Blank for method SM2510B-2011 reported a value greater than the reporting level for the analyte Specific Conductance. The concentration was 1.25 | | | | |
| 3153531002 | 4 | CWMP008W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO3/L. | | | | |

Certificate of Analysis

| | | | |
|-----------------|-------------------|---------------|-----------------------------------|
| Project Name: | CRESWELL | Workorder: | 3153342 |
| Purchase Order: | PO-1000246 | Workorder ID: | 1st QTR 2021 CWMP-FORM 19Q |

Dear Ms. Gallagher:

Enclosed are the analytical results for samples received by the laboratory on Wednesday, January 20, 2021.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Ms. Susan J Scherer (Project Coordinator) at (717) 944-5541.

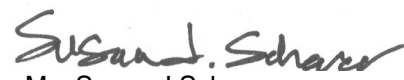

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Ashley Gichuki , Mr. Daniel Brown , Mr. Jeff Musser

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Ms. Susan J Scherer
Project Coordinator

SAMPLE SUMMARY

Workorder: 3153342 1st QTR 2021 CWMP-FORM 19Q

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

Standard Acronyms/Flags

| | |
|--------|--|
| C | Please reference the Project Summary section of this Certificate of Analysis for case narrative comments. |
| J | Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte |
| U | Indicates that the analyte was Not Detected (ND) |
| N | Indicates presumptive evidence of the presence of a compound |
| MDL | Method Detection Limit |
| PQL | Practical Quantitation Limit |
| RDL | Reporting Detection Limit |
| ND | Not Detected - indicates that the analyte was Not Detected at the RDL |
| Cntr | Analysis was performed using this container |
| RegLmt | Regulatory Limit |
| LCS | Laboratory Control Sample |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| DUP | Sample Duplicate |
| %Rec | Percent Recovery |
| RPD | Relative Percent Difference |
| LOD | DoD Limit of Detection |
| LOQ | DoD Limit of Quantitation |
| DL | DoD Detection Limit |
| I | Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL) |
| (S) | Surrogate Compound |
| NC | Not Calculated |
| * | Result outside of QC limits |

ANALYTICAL RESULTS

Workorder: 3153342 1st QTR 2021 CWMP-FORM 19Q

PARAMETER QUALIFIERS

| Lab ID | # | Sample ID | Analytical Method | Analyte |
|---|---|-----------|-------------------|-------------------|
| 3153342001 | 1 | CWMP016W | S4500HB-11 | pH |
| The pH analysis is an "analyze immediately" analysis. Parameters identified as "analyze immediately" require analysis within 15 minutes of collection, and are therefore analyzed outside of the method holding time when analyzed in the laboratory. | | | | |
| 3153342001 | 2 | CWMP016W | SM2320B-2011 | Alkalinity, Total |
| The Total Alkalinity is titrated to a pH of 4.5 and reported as mg CaCO ₃ /L. | | | | |
| 3153342002 | 1 | CWMP010W | S4500HB-11 | pH |

- | | | | |
|--|-------------|------------|-----------|
| 1. Were airbills / tracking numbers present and recorded?..... | <u>NONE</u> | YES | NO |
| Tracking number: _____ | | | |
| 2. Are Custody Seals on shipping containers intact?..... | <u>NONE</u> | YES | NO |
| 3. Are Custody Seals on sample containers intact?..... | <u>NONE</u> | YES | NO |
| 4. Is there a COC (Chain-of-Custody) present?..... | | <u>YES</u> | NO |
| 5. Are the COC and bottle labels complete, legible and in agreement?..... | | <u>YES</u> | NO |
| 5a. Does the COC contain sample locations?..... | | <u>YES</u> | NO |
| 5b. Does the COC contain date and time of sample collection for all samples?..... | | <u>YES</u> | NO |
| 5c. Does the COC contain sample collectors name?..... | | <u>YES</u> | NO |
| 5d. Does the COC note the type(s) of preservation for all bottles?..... | | <u>YES</u> | NO |
| 5e. Does the COC note the number of bottles submitted for each sample?..... | | <u>YES</u> | NO |
| 5f. Does the COC note the type of sample, composite or grab?..... | | <u>YES</u> | NO |
| 5g. Does the COC note the matrix of the sample(s)?..... | | <u>YES</u> | NO |
| 6. Are all aqueous samples requiring preservation preserved correctly? ¹ | N/A | <u>YES</u> | NO |
| 7. Were all samples placed in the proper containers for the requested analyses, with sufficient volume?..... | | <u>YES</u> | NO |
| 8. Are all samples within holding times for the requested analyses?..... | | <u>YES</u> | NO |
| 9. Were all sample containers received intact and headspace free when required? (not broken, leaking, frozen, etc.)..... | | <u>YES</u> | NO |
| 10. Did we receive trip blanks (applies only for methods EPA 504, EPA 524.2 and 1631E (LL Hg)?..... | <u>N/A</u> | YES | NO |
| 11. Were the samples received on ice?..... | | <u>YES</u> | NO |
| 12. Were sample temperatures measured at 0.0-6.0°C..... | | <u>YES</u> | NO |
| 13. Are the samples DW matrix ? IF YES, fill out Reportable Drinking Water questions below..... | | YES | <u>NO</u> |
| 13a. Are the samples required for SDWA compliance reporting?..... | N/A | YES | NO |
| 13b. Did the client provide a SDWA PWS ID#?..... | N/A | YES | NO |
| 13c. Are all aqueous unpreserved SDWA samples pH 5-9?..... | N/A | YES | NO |
| 13d. Did the client provide the SDWA sample location ID/Description?..... | N/A | YES | NO |
| 13e. Did the client provide the SDWA sample type (D, E, R, C, P, S)?..... | N/A | YES | NO |

Cooler #: _____
 Temperature (°C): 3 _____
 Thermometer ID: 525 _____
 Radiological (µCi): _____

COMMENTS (Required for all NO responses above and any sample non-conformance):

¹Final determination of correct preservation for analysis such as volatiles, microbiology, and oil and grease is made in the analytical department at the time of or following the analysis
